An Expert Session on "Big Data Analytics Process" by Alumni member Mr. Ankit Chandura date 28th January 2020

The amount of data generated today from all industry domains, also known as big data is huge, encompassing data gathering, data analysis, and data implementation process. The big data analytics trends are changing, from a departmental approach to business-driven data approach, embracing agile technologies and an increased focus on advanced analytics. To pace these changing trend it is essential understand the role of big data in organization and industry, SRIMCA had organized an expert session on the Big Data Analytics Process on 28th January 2020. Around 75 students of BCA 6th semester attended the session delivered by alumni in IT department of Axis Bank, Mr. Ankit Chandura, of batch 2006-2009. The session touched the Big Data Analytics process which is required in current era. He briefly described process of Banking sector and how to work with data which are in huge amount and in continuous manner. The session was quite interactive and followed by question answer session. The expert had promptly responded to all the queries raised by the students. He left the student with a take home message polishing technical skills with conceptual soundness. The session was informative and inspired students towards emerging domain of Big Data Analytics and Data Science Concept and want to build their carrier such sectors.
